Claims 4-9, 13, 15, and 20-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 3/28/2005.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17, and 36-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Webster Jr. 3726269 in view of Wolzinger et al 5,271,410. Webster shows a catheter for making thermodilution measurements of blood flow rate in both the retrograde and antegrade orientations (see for example, column 5, lines 37-38. It does not compensate for thermally induced errors. However, Wolzinger teaches that the thermistor in a thermodilution catheter must be thermally isolated from the lumen that carries injectate to offset for variations caused by the injectate passing near the thermistor (see last four lines of the abstract and column 3, lines 3-14). Hence, it would have been obvious to modify Webster Jr. to thermally isolate the thermistor, to improve the accuracy of measurement.

Claims 1-3, 10-12, 14, 16, 18, 19, and 26-35 are allowable.

Claims 1-3, 10-12, 14, 16, 18, 19, and 26-35 define over the art in that none of the art compensates for inside cooling by either precalibrating the thermally conductive properties of the catheter or by determining a calibration coefficient or thermal transfer coefficient for the catheter and adjusting a thermodilution measurement using the coefficient.

Applicant's arguments filed 3/24/2005 have been considered, but are deemed moot in view of the new grounds of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
